VEHICLE DEALERSHIP STOCK AUDIT SERVICE

Case Study: Vehicle Audit – Car Manufacturer

One of the world's leading automobile manufacturers required the dealerships to be audited for their finance division, to show if dealership floor plans were in line with actual stock on site.

REQUIREMENT

The finance division of the car manufacturer required **vehicle audits** to confirm dealership floor plans were in line with the actual stock on site

- Level of machinery to check varied per site
- Over **1000 vehicles** on some sites
- A selection of dealerships were audited
- Additional counts took place dependent on results

SOLUTION

RGIS worked with the finance division of the car manufacturer to complete vehicle audits.

- One auditor was sent per 100 vehicles to get the **initial count complete within a few hours**
- Part of the process was obtaining mileage for used/demo cars and also **reconciling missing vehicles**
- The customer provided us with a list of all units expected at each dealership, RGIS attended the site and **verified each unit by the VIN**
- Any units that were not physically sighted had to be entered under a valid exception such as 'sold' or 'on demo'
- A **high level reconciliation process** with paperwork evidence was required for the majority of missing vehicles e.g. whether a loan agreement was in place, and delivery receipts had to be provided by the dealership for all sold vehicles

RESULTS

After working with RGIS, the finance company gained the following:

- At the end of each inspection, RGIS submitted the **list of all sighted vehicles**
- Listed were also the exceptions of any vehicles not sighted via a third party online app
- An insight as to whether dealerships were **following procedures correctly**, and were able to issue violations where necessary, such as:
 - If mileage on a demo car was over a certain amount and the dealership had not moved the vehicle status to 'used'
 - If a vehicle had been sold and delivered but not paid out to the customer

By partnering with RGIS, **one of the world's leading automobile manufacturers** was able to **gain insight** as to whether dealerships were **following procedures correctly**, and were able to issue violations where necessary to avoid recurrence
