TOY STORE MULTIPLE INVENTORY COUNTS DUE TO MOVING TO SAP SOFTWARE

Case Study: Retail Inventory – Toy Retailer

A toy retailer needed an **accurate inventory count** of multiple toy stores due to moving to SAP software

TOY STORE MULTIPLE INVENTORY COUNTS DUE TO MOVING TO SAP SOFTWARE

Case Study: Retail Inventory – Toy Retailer

A Spanish company founded by a group of small toy makers in 1975 that operates under the cooperative regime, required the support of RGIS. It currently has 54 members. With 256 points of sale distributed throughout the Spanish geography, it has positioned itself as the first retail chain in Spain within the Spanish toy and game sector, thanks to an offer that includes more than 6,000 product references, including those that belong to its 16 own brands that it distributes exclusively.

With a staff of more than 1,100 employees and more than 110,000m^2 of retail space, the toy retailer has established itself as one of the main retail chains in the toy sector in Spain, with more than 8% market share.

REQUIREMENT

The toy retailer needed an accurate inventory count of multiple toy stores due to moving to SAP software, so required RGIS to provide the following:

- **Full counts** of six stores
- Counts to be conducted in **one and a half days**
- Not to impact customers or staff
- **Compatible reports** with the IT system

SOLUTION

The toy retailer partnered with RGIS to complete the **multiple toy store inventory count project**, and provided the following:

- Scheduled a team of **seven experienced RGIS auditors** per store
- **Audited 10% of stock** counted for accuracy
- Third party also completed checks to confirm accuracy

RESULTS

The toy retailer found that by outsourcing the **multiple toy store inventory count project** to RGIS to complete, the following was achieved:

- A total of **112,000 items** were counted
- All six stores **completed within the time frame** of one and a half days
- Accuracy of the count was very satisfactory, and confirmed by third party checks
- Reports sent were **compatible with the IT system** as requested

By partnering with RGIS, the toy retailer found that the **reporting of the stock** in the stores could be added to the IT system for the new SAP software, with the **assurance that the data was accurate**
